1. ENVIRONMENTAL POLICY	4
--------------------------------------	----------

1. Environmental Policy

The company's mission is to respond to the needs and expectations of our customers in the area of providing advanced technology IT products / solutions.

Our **goal** is:

- the protection of the environment, preventing any conditions and incidents that may lead to pollution or harm, as well as managing environmental resources sensibly and responsibly.
- to provide all the necessary resources and related information to minimize the environmental footprint of Company's activities and achieve environmental objectives and targets
- to set up, maintain, and monitor our facilities, installations and operations, according to the requirements and best practices related to the environment, taking into account the nature, scale and particularities of the Company's activities
- to manage efficiently company's waste, focusing on separate collection and recycling
- to measure and evaluate our environmental performance, based on appropriate indicators and objectives

In order to achieve the above, we express our **commitment** to the following principles:

- to ensure effective and excellent internal communication between the Company's management and all levels of personnel
- the recruiting of high qualified professionals and executives and their continuous and rigorous training for our staff and third parties on environmental issues.
- the reliability of the company's partners and suppliers and their continuous monitoring and evaluation
- the continuous monitoring and implementation of legislation
- Fully implement all procedures and instructions that comprise the Environmental Management System
- Periodically review and improve the efficiency of the Environmental and Management System processes.
- Provide the required resources for the achievement of all the above goals.
- Comply with the legal obligations and the environmental commitments.

- focusing on the principles of EN ISO 14001
- Continuously reduce the impact of its operations to the environment and prevent pollution, as well as continuous improvement of the management system, in order to enhance environmental performance.

The monitoring of the Environmental Management System by way of key performance indicators and the fulfillment of qualitative and quantitative goals, which will be periodically reviewed.

The Management
